## **FOREWORD**

It has been the purpose of the Catch Bulletins to present consistent tables of the commercial fish landings in California continuously from year to year. This bulletin is the fifteenth in the series which carries the historic record of the fisheries from 1926 through 1952. There is included in text and tables relevant information on such subjects as the marine sport catch, the live bait fishery and the census of the fleet and fishermen.

Credit for the collection of an increasingly improved record goes to the staff of the Wildlife Protection Branch and the Marine Fisheries representatives in the field offices. The compilation of material and publication of the bulletin is the responsibility of the staff of the statistical unit at the laboratory of the Marine Fisheries Branch at Terminal Island.

September, 1953

## **1. SPECIES PRESENT IN THE CALIFORNIA CATCH**

For all practical purposes the California salmon catch is composed of only two species. The king salmon, *Oncorhynchus tshawytscha*, usually comprises about 90 percent of the State's catch and 100 percent of the commercial river catch. The silver salmon, *Oncorhynchus kisutch*, makes up the remainder. In California a specimen of one of the other species of Pacific salmon is usually regarded as a mild curiosity.

The two California salmon are similar in appearance to anyone who is not thoroughly familiar with them, but they are quite different in habits and present radically different management problems. Some examples of these differences are given below:

California rivers produce the great bulk of the king salmon landed here, while Oregon streams produce most of the silvers landed in California. King salmon prefer larger rivers and are exceedingly abundant in the Sacramento-San Joaquin River system. Silver salmon prefer the smaller coastal streams, and it is rare for even a stray to be taken in the Sacramento-San Joaquin River system. The majority of California king salmon migrate to the ocean within a few months after they are hatched. All silver salmon stay in a stream until they are more than a year old. Most king salmon mature at four years; many at three years and many at five years; a few at two and six years of age. Silver salmon have a much less variable life history. In California practically all mature at three years except a few precocious males which spawn a year earlier. King salmon of the Sacramento River will average about 20 pounds at maturity and 40-pounders are not uncommon. Silver salmon will average 7 to 12 pounds at maturity and anything over 15 pounds is uncommon.

## **2. SEPARATION OF SPECIES BY DEALERS**

Legally each fish buyer is required to make a receipt for all fish purchased from the fishermen. This receipt must show, among other things, the pounds and price of each species delivered. The separation of salmon into the two species is, unfortunately, not at all trustworthy. It varies in reliability from dealer to dealer, port to port, and month to month. One reason for this is that the fish buyer is frequently a hurried and harried man. Salmon boats often arrive en masse and all of them want to be unloaded as quickly as possible. Market prices may force the dealer to separate the catch into silver salmon, small kings, medium kings, and large kings. There may be one or two "shorts" (salmon

below the legal size limit) which the dealer cannot legally purchase. Occasionally the job may be complicated still further by the presence of a halibut, lingcod, or rockfish in the catch, or by fish in such poor condition that the dealer will not accept them at the full market price. All of this has to be resolved in a very few minutes, and the temptation to simplify the paper work is understandable even though it is exasperating to people who need reliable statistics. Early in the season, when silvers are relatively scarce, many buyers will pay for them as small kings rather than weigh them out separately. If the market price for the two species is the same, the chances of the buyer weighing them separately are still further reduced. If the catch in an area is running over 90 percent kings, it will be classified as "salmon" without any prefix. It is not unusual for a month's catch receipts for a port to list perhaps 5,000 pounds of silvers, 5,000 pounds of kings, and 300,000 pounds of "salmon" (unclassified). It would be easy to assume from such figures that the unclassified salmon would be half silvers and half kings, but actually it would be more apt to be 95 to 99 percent kings.

In general, the greater the proportion of silver salmon being landed, the more reliable are the buyers' receipts. In Crescent City the proportion of silvers often exceeds 50 percent for extended periods, and the dealers do a reasonably good job of separation. Further south the proportion of silvers and the reliability of species separation decreases.

Until the buyers can be induced to fill out their individual receipts with more reliability, it will probably continue to be necessary for the statistical unit to publish only the combined landings of both species.

Notwithstanding the above difficulties, it has been necessary for the biological staff of the Marine Fisheries Branch to obtain a reasonably accurate idea of the amounts of king and silver salmon in the catches in various areas of the State. As power dams, irrigation canals, and pollution make inroads on the spawning area available to salmon, it becomes more and more necessary for the Pacific Coast states, Canada, and Alaska to manage their salmon supply as carefully as possible. As one phase of this management work, the three states have engaged in a large-scale salmon marking program in order to determine (among many other things) just what streams are producing the king and silver salmon landed in various ocean fisheries. This marking program has necessitated not only marking the small fish while they are still in fresh water, but carefully sampling the ocean catch at various ports from Central California to Alaska.

### **3. SALMON SAMPLING**

The salmon sampler's job includes keeping detailed records of any marked or tagged fish recovered, obtaining length measurements and scales from part of the fish sampled, and recording the number and weight of king and silver salmon in all boat loads which were examined. From the proportion of kings and silvers in the samples, we have calculated the total pounds of each species, area by area and month by month. King and silver salmon poundages included in this article are all for the year 1952. Similar (though somewhat less complete) sampling was done in 1950 and 1951.

#### 4. SEASONAL ABUNDANCE OF KING AND SILVER SALMON

Silver salmon are relatively short-lived fish with a life history which shows little variation. During their second year of life they are invariably far smaller than the 25-inch legal size limit; during their third year they are fished intensively for a few months; and at the end of that season, they spawn and die. When the commercial season opens on May 1st, only a small proportion of the silver salmon have reached 25 inches total length, but by mid-June, the majority are of legal size, and from that time until the close of the trolling season (September 30th) the silver salmon catch is made. In some seasons the fishermen do not seem to encounter any great number of silvers during May and early June. In other years they will encounter numbers of undersized fish which must, of course, be thrown back.

Figure 2 shows the growth of silver salmon during the fishing season. The data were accumulated from 974 fish taken by Fish and Game tagging crews during the periods 1939 to 1942 and 1948 to 1950. All suitable fish taken were tagged regardless of size; hence these measurements give a record of the small fish as well as of those of legal size. Note that 65 percent of the silvers taken in May were undersized. In June the undersized were down to 27 percent of the total, and for the remainder of the season only 9 to 13 percent were "shorts."

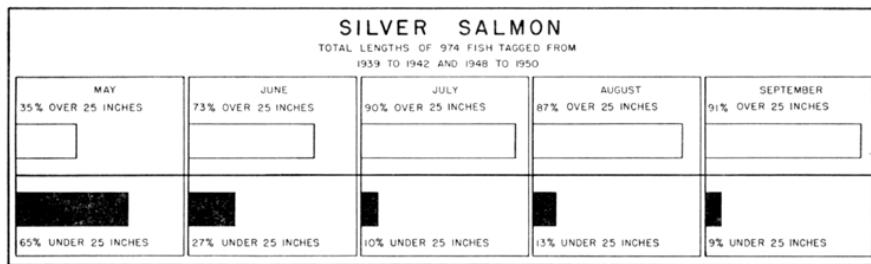

FIGURE 2. Proportion of legal sized and undersized silver salmon throughout the season. All marketable silver salmon are in their third year of life and are growing rapidly as the season progresses. Silvers in their second year are far below the 25-inch legal size limit, and almost no California silver salmon live to be more than three years old.

*FIGURE 2. Proportion of legal sized and undersized silver salmon throughout the season. All marketable silver salmon are in their third year of life and are growing rapidly as the season progresses. Silvers in their second year are far below the 25-inch legal size limit, and almost no California silver salmon live to be more than three years old*

As a rule, the king salmon is of legal size for more than a year; hence there are some available to be taken every month the season is open. The fastest growing kings reach the 26-inch size limit while in their second year. The majority of those which are in their third year are legal, and almost all older fish are well above legal size.

#### 5. ABUNDANCE BY AREA

Salmon are taken in numbers from Central California north to Alaska and south along the Asiatic Coast to Japan. California's salmon catch is almost all landed from Monterey north to Crescent City. The fishing boats make these catches from the vicinity of Monterey into southern Oregon. Some salmon are landed south of Monterey each season, but the poundages are always small. In 1952 these southern landings amounted to less than one-fifth of 1 percent of the State's total. Figure 3 shows the principal salmon landing ports of California.

FIGURE 3. Salmon ports of California. This map shows only those ports which received more than 10,000 pounds of salmon during 1952.

*FIGURE 3. Salmon ports of California. This map shows only those ports which received more than 10,000 pounds of salmon during 1952*

On the West Coast of North America king salmon are taken in numbers from Monterey Bay to Alaska, and silver salmon are abundant from the extreme northern part of California north to Alaska. Crescent City is the only California port in which the catch of silver salmon habitually rivals that of kings. In 1952, the Crescent City catch was approximately 65 percent silvers by weight. The abundance of silvers steadily decreases to the south. In the San Francisco and Monterey areas these fish normally amount to less than 1 percent of the salmon catch.

Table 1 shows the 1952 catch of king and silver salmon by statistical regions. Since the variation in abundance of silvers within the Eureka Region is so great, Table 2 has been included to give a more detailed breakdown within this area. The Crescent City landings include only Crescent City, but those listed for Eureka include the nearby ports of Trinidad and Fields Landing. Fort Bragg catches include fish from Shelter Cove to Point Arena.

The sampling of the catches used in this study was done in the following places during the 1952 season:

### **5.1. Eureka Region**

Crescent City area; 9.8 percent of the catch was examined. The season's catch was 64.6 percent silver salmon by weight. Sampling was done at Crescent City and at Eureka. Many loads of fish landed at Crescent City were trucked to Eureka by the dealer and were sampled on arrival. In August the sampling of Crescent City fish was interrupted and the dealers receipts were used to separate kings from silvers.

Eureka area; 13.5 percent of the catch was examined. The season's salmon catch was 22.1 percent silvers by weight. Almost all the sampling was done at Eureka. A few fish were examined at Trinidad.

Fort Bragg area; 16.3 percent of the catch was examined; 5.0 percent by weight were silvers. All the sampling was done at Fort Bragg.

In the Eureka region as a whole, silver salmon were 29.7 percent of the seasonal total.

### **5.2. San Francisco Region**

11.7 percent of the catch was examined. Silver salmon were only 0.3 percent of the total. Most of the sampling was done at Point Reyes because over half of the region's salmon landings were delivered to this tiny port. Additional sampling was done at Princeton and at Bodega Bay. The port of San Francisco was avoided because landing points are so scattered that a sampler could intercept relatively few boat loads in a day. Only 14 percent of the region's salmon landings are delivered to the City of San Francisco.

### **5.3. Monterey Region and Southward**

16.5 percent of the catch was examined. Only 0.1 percent were silvers. Sampling was done at Moss Landing which is the central one of the Monterey region's three salmon ports. The regions south of Monterey received such small catches that they were not sampled.

Small *catches* of salmon were made in the vicinity of Avila and Morro Bay. In addition, a few *landings* of salmon were made in Southern California by boats which made their catches off northern or central

TABLE 2  
*King and Silver Salmon Landings in the Eureka Region, 1952, by Local Areas*

California and then went south to convert to albacore or other fishing. In the tables these catches were combined with those of the Monterey Region.

#### 5.4. Sacramento Region

26.8 percent of the catch was examined. Only river-caught salmon are landed in this region. All the salmon are kings; hence there is no problem of species separation. Sampling (to determine the proportion of marked fish) was done during August and September, most of it at Pittsburg, some at Benicia, and a small amount at Martinez.

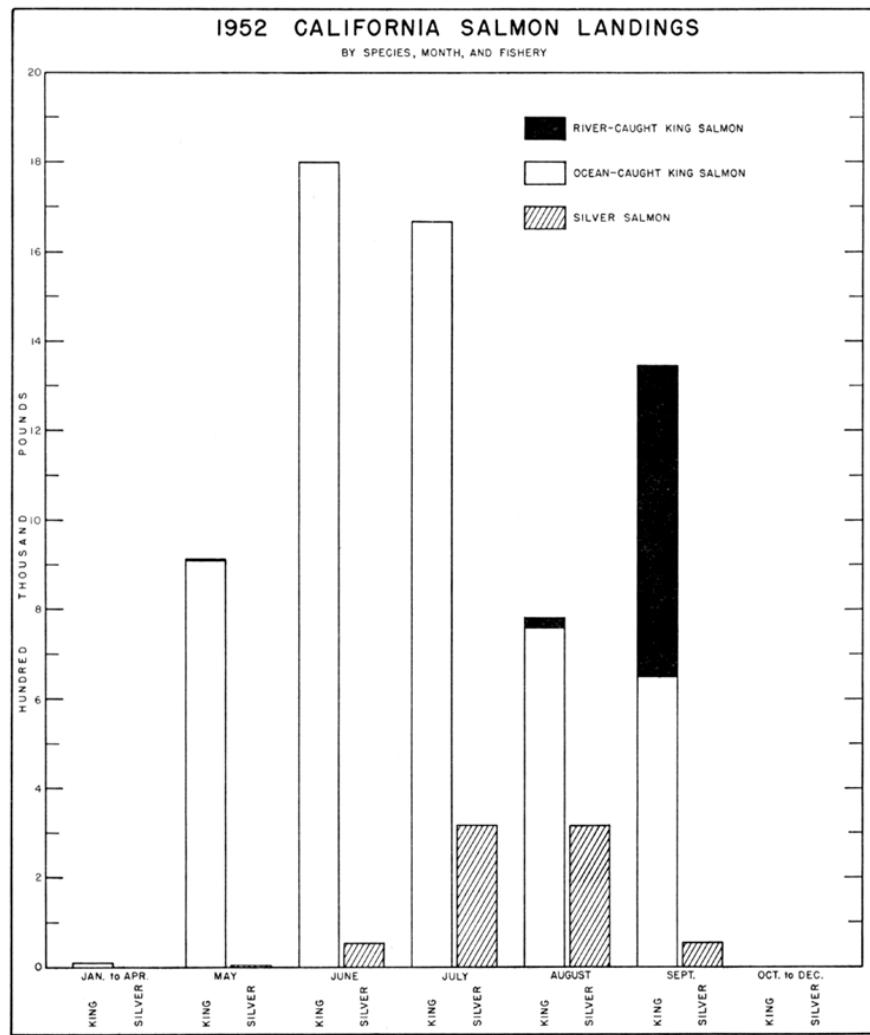

FIGURE 4. 1952 salmon landings by months, separated into ocean-caught kings, river-caught kings, and silvers. All California's commercially caught silver salmon are taken in the ocean. The ocean salmon season is open from May 1st through September 30th. The river season is open from January 1st through June 15th; from August 10th until sunrise September 26th; and from November 15th through December 31st. River fishing is prohibited from sunrise Saturday until sunset on the following Sunday.

*FIGURE 4. 1952 salmon landings by months, separated into ocean-caught kings, river-caught kings, and silvers. All California's commercially caught silver salmon are taken in the ocean. The ocean salmon season is open from May 1st through September 30th. The river season is open from January 1st through June 15th; from August 10th until sunrise September 26th; and from November 15th through December 31st. River fishing is prohibited from sunrise Saturday until sunset on the following Sunday*

The combined poundages of king and silver salmon shown in Tables 1 and 2 were taken from dealers' landing receipts as are practically all records of California commercial fish landings. The proportion of king and silver salmon was obtained from the samplers' records, and the catch of each species calculated by applying this proportion to the combined landings of species. Being obtained from samples, such calculations can be no better than good approximations. The poundages of kings and silvers given in the tables were carried to the nearest pound only to make the tables balance.

## 6. LIST OF COMMON AND SCIENTIFIC NAMES OF FISHES, CRUSTACEANS AND MOLLUSKS

Common name	Scientific name
Anchovy	<i>Engraulis mordax</i>
Barracuda	<i>Sphyraena argentea</i>
Bonito	<i>Sarda lineolata</i>
Cabezon	<i>Scorpaenichthys marmoratus</i>
Cabrilla	<i>Epinephelus analogus</i>
Carp	<i>Cyprinus carpio</i>
Catfish	
White catfish	<i>Ictalurus catus</i>
Brown bullhead	<i>Ameiurus nebulosus</i>
Corvina, Mexican	
Gulf corvina	<i>Cynoscion othonopterus</i>
Orangemouth corvina	<i>Cynoscion xanthulus</i>
Flounder	
Starry flounder	<i>Platichthys stellatus</i>
Small amounts of other flatfishes	
Flyingfish	<i>Cypselurus californicus</i>
Grouper	Species of <i>Mycteroperca</i>
Hake	<i>Merluccius productus</i>
Halibut, California	<i>Paralichthys californicus</i>
Halibut, Pacific	<i>Hippoglossus stenolepis</i>
Hardhead	
Greaser blackfish	<i>Orthodon microlepidotus</i>
Hardhead	<i>Mylopharodon conocephalus</i>
Herring	<i>Clupea pallasii</i>
Kingfish	
White croaker	<i>Genyonemus lineatus</i>
Queenfish	<i>Seriphus politus</i>
Lingcod	<i>Ophiodon elongatus</i>
Mackerel, jack	<i>Trachurus symmetricus</i>
Mackerel, Pacific	<i>Pneumatophorus diego</i>
Mullet	<i>Mugil cephalus</i>
Perch	
Blacksmith	<i>Chromis punctipinnis</i>
Halfmoon	<i>Medialuna californiensis</i>
Opaleye	<i>Girella nigricans</i>
Surfperch	Members of family <i>Embiotocidae</i>
Pompano, Califor- nia	<i>Palometa simillima</i>
Rock bass	
Kelp bass	<i>Paralabrax clathratus</i>
Sand bass	<i>Paralabrax nebulifer</i>
Rockfish	All species of <i>Sebastodes</i> and <i>Sebastolobus</i>

Sablefish	<i>Anoplopoma fimbria</i>
Salmon	
King	<i>Oncorhynchus tshawytscha</i>
Silver	<i>Oncorhynchus kisutch</i>
Sanddab	<i>Citharichthys sordidus</i>
Small amounts of other species	
Sardine	<i>Sardinops caerulea</i>
Sculpin	<i>Scorpaena guttata</i>
Sea bass, black	<i>Stereolepis gigas</i>
Seabass, white	<i>Cynoscion nobilis</i>
Seatrout, greenling	<i>Hexagrammos decagrammus</i>
Shad	<i>Alosa sapidissima</i>
Shark	
Basking shark	<i>Cetorhinus maximus</i>
Bonito shark	<i>Isurus glaucus</i>
Dogfish	<i>Squalus acanthias</i>
Leopard shark	<i>Triakis semifasciata</i>
Soupfin	<i>Galeorhinus zyopterus</i>
Thresher	<i>Alopias vulpinus</i>
Varying amounts of other species	
Sheep-head	<i>Pimelometopon pulchrum</i>
Sierra	<i>Scomberomorus sierra</i>
Skate	
Big	<i>Raja binoculata</i>
California	<i>Raja inornata</i>
Longnose	<i>Raja rhina</i>
Smelt	
Grunion	<i>Leuresthes tenuis</i>
Jacksmelt	<i>Atherinopsis californiensis</i>
Surf smelt	<i>Hypomesus pretiosus</i>
Topsmelt	<i>Atherinops affinis</i>
Sole	
English	<i>Parophrys vetulus</i>
Dover	<i>Microstomus pacificus</i>
Petrale	<i>Eopsetta jordani</i>
Rex	<i>Glyptocephalus zachirus</i>
Varying amounts of other species	
Splittail	<i>Pogonichthys macrolepidotus</i>
Sucker	<i>Catostomus occidentalis</i>
Swordfish	<i>Xiphias gladius</i>
Tomcod	<i>Micromugil proximus</i>
Tuna	
Albacore	<i>Thunnus germo</i>
Bigeye	<i>Parathunnus sibi</i>

Bluefin	<i>Thunnus saliens</i>
Skipjack	<i>Katsuwonus pelamis</i>
Yellowfin	<i>Neothunnus macropterus</i>
Turbot	
Curlfin	<i>Pleuronichthys decurrens</i>
Diamond	<i>Hypsopsetta guttulata</i>
Hornyhead	<i>Pleuronichthys verticalis</i>
Small amounts of other species	
Wahoo	<i>Acanthocybium solandri</i>
Whitebait	<i>Allosmerus elongatus</i> <i>Spirinchus starksii</i> Young of several other species
Whitefish, ocean	<i>Caulolatilus princeps</i>
Yellowtail	<i>Seriola dorsalis</i>
Crab	<i>Cancer magister</i>
Crab, rock	Other species of <i>Cancer</i>
Lobster, spiny	<i>Panulirus interruptus</i>
Prawn	<i>Pandalus</i> sp.
Shrimp, bay	<i>Crago franciscorum</i> <i>Crago nigricauda</i> <i>Squilla</i> sp.
Shrimp, ocean	<i>Pandalus jordani</i> <i>Pandalus platyceros</i>
Abalone	
Pink	<i>Haliotis corrugata</i>
Red	<i>Haliotis rufescens</i>
Southern green	<i>Haliotis fulgens</i>
Clam	
Gaper	<i>Schizothaerus nuttalli</i>
Jackknife	<i>Tagelus californianus</i>
Japanese lit- tleneck	<i>Tapes semidecussata</i>
Pismo	<i>Tivela stultorum</i>
Washington	<i>Saxidomus nuttalli</i>
Mussel	<i>Mytilus californianus</i> <i>Mytilus edulis</i>
Octopus	<i>Paroctopus apollyon</i>
Oyster	
Eastern	<i>Crassostrea virginica</i>
Pacific	<i>Crassostrea gigas</i>
Squid	<i>Loligo opalescens</i>

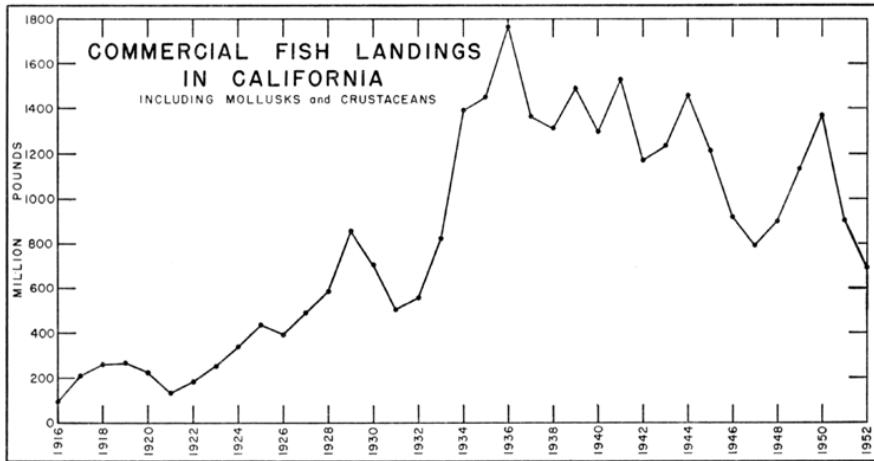

FIGURE 5. Total annual landings and shipments into California of commercial fish, mollusks and crustaceans. Includes sardine deliveries to reduction ships during 1930 through 1938. See Table 3.

TABLE 3

*Total Annual Landings and Shipments Into California of Commercial Fish, Mollusks and Crustaceans Includes Sardine Deliveries to Reduction Ships During 1930 Through 1938*

## 7. EXPLANATION OF TABLES

Beginning with records for the year 1926 we have published in the Catch Bulletins a series of tables which present all available records of landings of commercial fish, mollusks and crustaceans in California. We have also published tables on relevant subjects such as the number of boats in the fleet, a census of the commercial fishermen and the value of the catch to the fishermen.

The landing totals include two integrals, the poundage caught and landed by the California fleet of fishing vessels fishing in waters exploited by the fleet, and the shipments. The California fleet includes the California vessels plus those vessels from Oregon, Washington and Alaska which register to fish in California waters and deliver to California ports. The shipments include poundages originating in other states or foreign countries and delivered by common carrier to California ports. In the 1952 tables there is also included with the shipments a small poundage taken by California vessels in waters not currently exploited by the fleet.

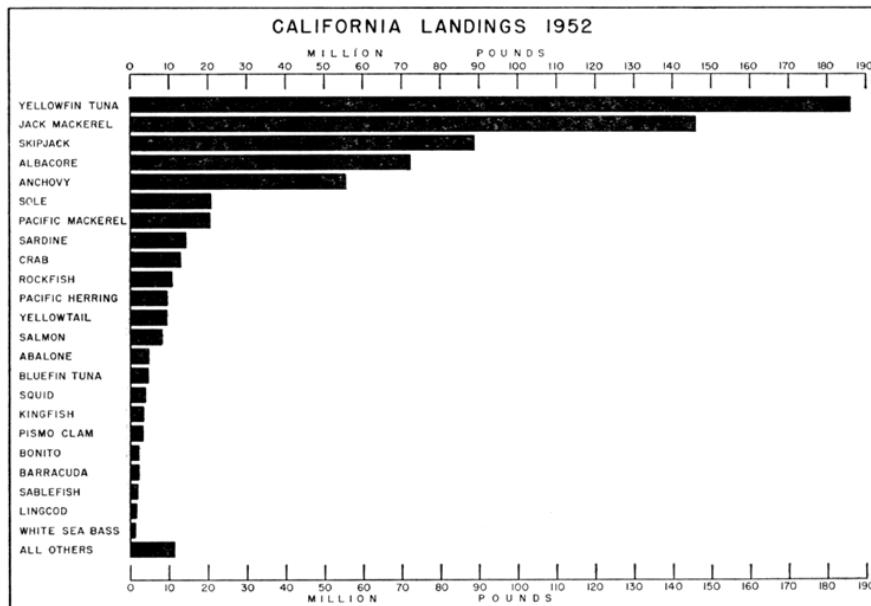

FIGURE 6. The relative landings in 1952 of the more important commercial species. Includes shipments with the catch of the California fleet. See Table 4.

FIGURE 6. The relative landings in 1952 of the more important commercial species. Includes shipments with the catch of the California fleet. See Table 4

TABLE 4  
Total Commercial Fish Landings and Shipments Into California During 1952

FIGURE 7. The relative value in 1952 of the more important commercial species. This chart is based on the figures in Table 5, which are derived from the comparable figures in Tables 5 and 20

TABLE 5  
Value of Commercial Fish Landings and Shipments Into California During 1952

Species	Value	Species	Value
Yellowfin tuna.....	\$29,336,957	Bluefin tuna.....	\$733,224
Albacore.....	12,515,283	Rockfish.....	610,175
Skipjack.....	11,424,498	Sardine.....	523,120
Jack mackerel.....	4,754,969	Abalone.....	431,094
Salmon.....	2,109,077	All others.....	3,408,534
Crab.....	1,893,011	Total value.....	\$71,982,774
Sole.....	1,429,984		
Anchovy.....	1,153,156		
Yellowtail.....	874,228		
Pacific mackerel.....	785,464		

TABLE 5  
Value of Commercial Fish Landings and Shipments Into California During 1952

The shipments are composed chiefly of frozen tuna destined for canning in the California plants. Our record does not include all of the fresh fish and shellfish brought into California for use in fresh state or the imported frozen packaged goods.

Weights are for whole fish and no adjustment is made when the original record occasionally shows items have been cleaned. In a few cases where it is known that all of the landings of a given species are cleaned in a like manner the cleaning loss can be estimated. This is true in the case of catfish where there is a known loss of 50 percent and the reported weight can safely be doubled to cover cleaning loss. Shellfish are frequently reported in numbers and the following conversion factors have been used to report the weight in the shell.

Crab, market	2 pounds each
Abalone, red	50 pounds per dozen
Abalone, pink	35 pounds per dozen
Abalone, green	35 pounds per dozen
Clam, gaper	2 pounds each
Clam, Mexican Pismo	8 pounds round weight per 1 pound cleaned weight
Clam, Washington	7 pounds per dozen

Halibut delivered in the San Francisco region is not always separated by species. Hence the total landed in that region is reported as 90 percent Pacific halibut and 10 percent California halibut. This proportion has been determined through periodic sampling of the landings by the biological staff.

The marine sport catch in Table 28 is given in numbers of fish for the reason that it is difficult to obtain the weight of catches made by the recreational fishermen. This record covers only that sport fish taken by the charter and party boats operating under permit and does not include the catch made from privately owned boats, from wharves or by the surf fishermen. The live bait record in Table 29 covers only that bait caught for the use of the marine sport fishermen by a group of boats which fish only for bait. The regular commercial fishing vessels catch and use their own bait and no record is available of the quantity.

## 7.1. Statistical Regions

The boundaries of the regions of landings shown in Figure 1 and in the tables are as follows:

Eureka region: Del Norte, Humboldt and Mendocino Counties.

Sacramento region: Sacramento and San Joaquin River systems with the delta areas, including Suisun Bay and Lake County.

San Francisco region: Sonoma, Marin, San Francisco and San Mateo Counties, including San Francisco and San Pablo Bays; Alameda and Contra Costa Counties to Carquinez Straits.

Monterey region: Monterey and Santa Cruz Counties.

Santa Barbara region: San Luis Obispo, Santa Barbara and Ventura Counties.

Los Angeles region: Los Angeles and Orange Counties.

San Diego region: San Diego and Imperial Counties.
